

Ohai Nation: A Decentralized Nation to Heal Earth

Matthew Weintrub
matt@ohai.earth

There is one truth: we - the human family - are eternal beings of light incarnated on earth to co-create and bear witness to the power of manifestation. By accepting this truth, you accept the sacred duty to create a better world for our children, their children and all future children. With this understanding, I humbly present on behalf of Hashem, the Great Spirit, the Great Mystery and all of Her Angels, Her Spirits and Her Magical Beings a beautiful vision called Ohai Nation.

Abstract

Ohai is the first decentralized nation. To guide our mission and principles, Ohai is working with the Indigenous Nations of Earth and the wisdom keepers who have lived sustainably with nature since the beginning of time. Ohai Nation consists of a decentralized social wallet and off-grid communities. The core infrastructure is the Social Wallet. Today's crypto wallets are developer-focused applications such as MetaMask which are a gateway to interact with NFTs, Staking, Swapping and DeFi; however, these applications are not accessible to the average consumer. Social wallets are the evolution of the crypto wallet; they are consumer-focused applications designed to onboard hundreds of millions of users into web3. With the Ohai Wallet any member of the human family will be able to send money instantly, without fees on the blockchain anywhere around the world. Within the wallet there exists a social network where all citizens own their data, can donate their data to be monetized and the monetization can be used to heal earth through the preservation of rainforest, or by restoring coral networks in the oceans, or by sustainable forestry, etc. The network, designed to operate as a cooperative, will also use its profits to purchase and develop decentralized cities to support and grow our mission: creating peace on earth through healing. Welcome to Ohai :)

Ohai Social Impact Wallet

Ohai is a social blockchain infrastructure project designed to operate as a public utility for the commons of humanity.

Phase 1: The Crypto Wallet

Most blockchains and cryptocurrencies do not target the average individual or merchant nor consider how to onboard them into the crypto economy. We believe by creating a consumer friendly user experience similar to what consumers experience in web 2.0, that we can onboard a large community. We envision a peer-to-peer payments platform that is so easy and valuable to use that individuals choose to opt out of the fiat monetary ecosystem and opt to keep their cash in the cryptocurrency ecosystem. We envision the ability for users to earn a higher APY on

stablecoins (aka cash) deposits than what is available to users in the fiat banking system. Think Venmo/Cashapp for Crypto.

Phase 2: Decentralized Social Network

Social media is a public good; however; in its current form it does not serve the public well. At Ohai, our goal is to gamify users' impact so that when they generate data for the network, we reward them with carbon credits. We want to make it easy for people to do good and ultimately feel good even while browsing the web from their phone.

Today, Social media is controlled by a coterie of private companies. Creators who produce content for these networks are underpaid and their ads-driven business model forces companies to make choices which benefit advertisers while harming the average user's experience. While consumers have become more literate about data privacy, that allure of data privacy is not enough for users' to abandon the convenience of existing centralized systems.

This is why Ohai is focused on social impact and community building. Green consumers are people who are aware of their obligation to protect the environment by selectively purchasing green products or services. They are willing on average to spend 25% more purchases that are considered good for the environment (1). 33% of global citizens are now considered green consumers (2). Green consumers want environmental protection to be easy. In the US, children and teens are generally more concerned than adults about the environment, and are more knowledgeable about green alternatives. Gen Z is considered the socially conscious generation. Despite what other generations think of them, Gen Z is not a selfish or vain generation. Their worries are primarily focused on the "bigger picture", they are worried for everyone's future. In the CGS 2019 U.S. Consumer Sustainability Survey, more than 1,000 consumers were surveyed as to their buying habits, revealing that more than 66% of the respondents consider sustainability when making a purchase and are willing to pay more for sustainable products. Green consumers are the ideal target market for Ohai.

Product Requirements:

i. Social Network

Ohai will develop a decentralized social network built on top of the Ohai Wallet. Users will be able to post photos, videos, audio files, stories, links and other multimedia content. Users will be able to create communities to share media and communicate.

ii. Search Engine

The Ohai search engine will allow users to search the web anonymously. For users who opt-in to donating their data, Ohai will monetize the anonymized data and allow the community to participate in voting on how to allocate said profits.

iii. NFT Crowdfunding Platform

The Ohai NFT product will allow individuals, communities, non-profit organizations and communities to fundraise money using NFTs in both digital and physical product formats.

iv. Wisdom Wiki

The Wisdom Wiki will become a digital Library of Alexandria. This library will serve to elevate the purpose of Ohai to a higher level than a mere social network. We want to help souls become self-realized and to achieve the best versions of themselves. To do this, we will curate Indigenous wisdom from around the world to provide education to our citizens about the true nature of reality.

Ohai Chain

We are seeking to develop Ohai Chain - a blockchain that can achieve our goals of sending money freely and quickly at scale around the world. We are open to building this chain on any L1 that can address the requirements. We also are open to pursuing our own research and development.

Requirements:

- 10K TPS
- < \$.0001 fees
- Smart contracts

Ohai Villages

We are building decentralized off-grid eco-villages. These villages will run on the Ohai Platform. After the pilot stage, we will scale up the concept into master-planned community developments.

Legal Structure

The Ohai Village is a pilot to produce decentralized communities and we can scale to master planned communities. Ohai Villages is structured as a community real estate investment trust (cREIT). A cREIT is a clone of the Real estate investment trusts (REITs) which are a special type of trust that allows investors to buy real estate and share in the profits and rents. We want to turn the REIT model on its head by creating a small, safe, local and low-dollar investment opportunity for all within a community to participate in, thus, we introduce the cREIT.

Using Ohai's NFT platform, we will offer regulated sNFT (securitized NFTs) which allow investors to subscribe to our vision, locally or globally, for a better world by pledging \$10 to \$1000 a month. That's quite different from REITs, which often require \$200,000 annual income minimums (or "accredited investor" status) in order to invest. Unlike most REITs that have difficult sale or withdrawal processes, in this one, investors would be able to easily cash out in case of an emergency. The cREIT is designed to benefit local residents, unlike some commercially offered products, a few of which have been documented to favor sellers over investors.

Fulfilling an Ancient Prophecy

From the Jordan river to the silk road, from the Bering strait, to the Mississippi river and into the Amazon basin, many tribes and cultures around the world share similar prophecies about a moment in time happening now in the year of 2022. These prophecies of old tell of a time when the Earth would be on the edge of disaster. They teach us that a new tribe made of many tribes would be born to unite the world. This nation would be made of peoples of all races, colors and creeds. They would use their compassion, insight and love to begin a Great Healing of Mother Earth. We are building Ohai as an offering to fulfill these prophecies.
